

Hot Tub Troubleshooting Tip

Hot Tub Cover Issues

Step 1: Check for Waterlogging

- ❑ **Remove the cover and inspect for water absorption:** If the cover feels heavy and waterlogged, allow it to dry out completely in a sunny, dry place.
- ❑ **Consider replacing the cover:** If drying doesn't help or the cover is old and deteriorating, replace it with a new, waterproof cover.

Step 2: Clean and Condition the Cover

- ❑ **Use a mild soap and water to clean the cover:** Gently scrub the cover with a soft brush, rinse with water, and allow it to dry.
- ❑ **Apply a UV protectant or conditioner:** Use a product designed for hot tub covers to protect against UV rays and extend the cover's life.

Step 3: Ensure Proper Fit

- ❑ **Check that the cover fits snugly and seals the hot tub properly:** Adjust straps and clips to secure the cover tightly. A proper fit helps retain heat and keeps debris out.

Step 4: Check Cover Lifters

- ❑ **Ensure cover lifters are properly installed and functioning:** Inspect the lifters for any loose screws or bolts and tighten them. Replace any broken parts to ensure easy cover removal and replacement.
